## PROFILE

Senior Software Engineer with 7+ years of experience designing and modernizing production mobile applications and cloud-backed systems. Deep experience with Flutter, Firebase, Google Cloud, TypeScript, and native Android. Known for taking ownership of complex systems, untangling tightly coupled codebases, and building maintainable architectures that support ongoing product development.

## TECHNICAL SKILLS

|                         |                                                                                                                          |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------|
| MOBILE                  | Flutter/Dart, Android/Kotlin/Java, iOS/Swift, Flutter Web                                                                |
| BACKEND & CLOUD         | Firebase, Firestore, Cloud Functions, Cloud Tasks, Cloud Storage, Google Cloud Platform, TypeScript/Node.js, REST APIs   |
| ARCHITECTURE & DELIVERY | Layered architecture, system design, state management, testing, CI/CD, security, authentication, performance & debugging |

## PROFESSIONAL EXPERIENCE

### Senior Software Engineer (Consulting) | Independent

2024 - Present

#### SELECTED ENGAGEMENT GOLF PLATFORM | Lead Engineer & Technical Owner

- Brought in to redesign the architecture of a production Flutter application with virtually no separation of concerns; established a layered architecture while legacy and modernized code ran side by side, allowing feature delivery to continue throughout the migration.
- Designed and implemented a game-agnostic scorecard generation engine that isolates scoring logic from presentation and produces a normalized model the UI can render without game-specific knowledge.
- Built modular resolver components for game-specific scoring behavior, creating an extensible foundation for adding new formats with minimal client-side changes.
- Own application architecture, backend services, data modeling, security, release decisions, and overall technical direction across Flutter, Firebase, Google Cloud, and TypeScript.
- Added unit and integration coverage around the new architecture and partnered with QA to reduce regression risk as legacy code was retired.

### Lead Flutter Architect | Clean Simple Eats

2023 - 2026

- Led architecture and ongoing development of a production Flutter application and supporting Firebase/GCP infrastructure, including authentication, Firestore, Cloud Functions, Cloud Storage, Remote Config, OneSignal, Shopify integrations, and internal tooling.
- Designed a resilient achievement processing system using Google Cloud Functions and Cloud Tasks, moving qualification checks to asynchronous queue-based processing to reduce dropped work and timeout-related failures.
- Built and maintained internal Flutter web tools used for content management and day-to-day business operations.
- Investigated complex production issues spanning the mobile app, backend services, authentication, and third-party subscription integrations.

### Flutter Developer | Udo

2021 - 2023

- Developed and tested cross-platform features for iOS and Android, contributing across UI implementation, application logic, and QA.
- Earned expanded engineering responsibilities within two months based on technical performance and project ownership.

### Android Developer | Cricut

2020 - 2021

- Developed production features and resolved issues for an Android application used by millions of customers.
- Led implementation efforts across a subset of engineers for large feature initiatives.
- Pioneered a multi-module, multi-library Android architecture spanning 100+ modules and 20+ first-party libraries using GitHub Actions and GitHub Packages.

## EDUCATION

Brigham Young University | B.S. Computer Science, Minor in Mathematics  
3.9 GPA | Dean's List | Phi Eta Sigma Honor Society

2019
